

COMPOSITE ROBOTIC ARM

ADVANTAGES

- ✔ Outstanding Mechanical Properties
- ✔ Lightweight Carbon Fiber Solution
- ✔ Increased Production Speed And Efficiency
- ✔ Superior Vibration Stability
- ✔ Avoided Robot Damage In Crash

ABOUT

Composite robotic arms perform more effectively than conventional robotic arms. Because they have higher stiffness, lightness, wear resistance and deformation performance than conventional robotic arms.

Thanks to our innovative filament winding technology and our professional team, we produce and develop state-of-the-art robotic arm apparatus.
